

GOD'S DRAMATIC
COPPER OUTPUT
IS DECREASED

Rev. Milo Atkinson Opens
Union Services With an
Eloquent Sermon.

The omnipotence and omnipresence of God was the theme discussed by Rev. Milo Atkinson, at the opening services Sunday night of the union open air meetings, which are to be held during the summer at Cleveland square by the First Methodist, First Presbyterian, First Christian, First Congregational and Episcopal churches.

Rev. Mr. Atkinson, newly arrived pastor of the First Christian church, delivered the opening sermon with an eloquence and freedom of delivery that held the immense congregation until the closing words of the closing prayer. The congregation opened the services with several selections. E. K. Keckmeyer at the organ. Dan Bourke sang a solo. Ted Lane and Miss Edith Dignan accompanied the pianist on cornet.

Introduced by Rev. C. L. Overstreet, pastor of the First Presbyterian church, Mr. Atkinson said in part:

God is everywhere. There is no part of the universe, no star so remote, no point so inaccessible, and no distance so great, that God is not there. Wherever man and his thoughts are, there is God. As well attempt to drive man of his personality, as attempt to drive him of the presence of the Divinity. He is constantly everywhere, and it is the lack of realization of this fact that is responsible for much of the wrongdoing of the world. Many a man is checked in the commission of sin by the presence of a saint, but never by the presence of God. What then would be the result if all men knew that God is constantly with them, constantly watching every act and knowing every thought?

Shows Respect For Christian.

Some years ago I had occasion to ride with a traveler who was sadly put out about a mishap he had encountered on his journey. He vented his displeasure in a stream of profanity, as black as ever I heard. In the course of our conversation he remarked that I was a minister of the gospel and apologized profusely, saying that while he was not a Christian himself he had a deep respect for men who were sincere in their faith. He went on to say that he had never known a man who was so unkind to his fellow men as I was. And I thought that if the Lord is so good to him, he would have been a good deal more kind to me. But the Almighty is acquainted with every heart and every thought.

Preaches To Negroes.

Capt. O. J. W. Scott, chaplain Tenth cavalry, will arrive here this afternoon and will preach at the visitors' chapel, Third and Tenth streets, tonight, leaving Tuesday for Fort Huachuca, Ariz.

New Crushing Plant
Gold Roads Mine Is
Soon To Be Operated

Kingman, Ariz., July 8.—The new crushing plant of the Gold Roads mine, owned by the United States Smelting, Refining and Milling company, will be in operation within a few weeks, with capacity of 200 tons a day. A lease on the old mill by the Gold Ore company has expired, and this plant will be worked over. It will handle the ore from the crushing plant by cyanide, the pulp being sent to a steam boiler. A large amount of machinery has been installed, including a power plant and a new compressor.

Under the management of D. R. Hale, the company has been developing its property for about a year and has located and is now working on the mill. A force of miners is working on the west side of the 200 level, looking for a big vein that faulted in that locality.

The mill is to handle up to 100 tons a day for the Gold Ore, which is said to have a five foot ore body on the 200 level that samples 375. Several attachments on the Gold Ore have been adjusted and work is proceeding. Outman district now is turning out nearly \$200,000 a month in gold bullion, more than half of it coming from the United Eastern, which now is working on its eighth level, 1950 feet below the shaft collar.

At Cerbat, the Dallas Mining company has cleaned out and retimbered the old Texas mine, and has installed a modern surface plant. High grade silver ore is being taken from the upper workings and shipments have been started. Development is to the depth of 230 feet. The main owners within the company are M. M. Dwyer and G. S. Duschak, of New York.

Bisbee Central Labor
Union Is Opposed To
Employment of I. W. W.

Bisbee, Ariz., July 8.—The Bisbee Central Labor union has adopted two resolutions, the first of which is a declaration of opposition to the employment of I. W. W. members in the mines. The union also announced that it will not accept any member of any organization affiliated with this body who took part in the strike in 1913. It further was resolved that all delegates from affiliated unions, upon presentation of credentials, be asked this question: "Did you, on or about July 12, 1913, take part in any way in a deportation of Chinese?" and that none of them are employed around the mines.

The labor union for women's work is being organized by the union and many of the women are working in the mines.

COPPER OUTPUT
IS DECREASED

Falling Off of a Million
Pounds in May for Arizona Is Reported.

Bisbee, Ariz., July 10.—Estimate is made that the June production of copper in Arizona aggregated about 71,000,000 pounds, a drop of 1,000,000 pounds from the May record. This drop is charged somewhat to the discouragement of the smaller producers over maintenance of the copper price, this month raised to 25 cents. Considering the one day difference in the month, the larger producers about held their own, save for the United Verde Extension, which dropped off 1,000,000 pounds, probably due to a caving of shipments in view of the near operation of a part of its new smelting plant.

The Shattuck lead and silver mill is to be in operation within a few days, with capacity for 400 tons a day, fed from reserves, outside of the copper deposits, estimated at 1,000,000 tons. It is believed probable that centering on this ore will somewhat decrease the copper output. The mill has cost about \$300,000.

Worked out in a test mill, these appears no doubt of the efficiency of the system adopted. Power at first will be from the Calumet & Arizona company's power house.

Dean-Arizona, in its new work, is picking up much commercial ore on its 1400 and 1500 levels, and has started on cutting the same material on the 1600 level, where the shaft, where better than 5 percent sulphides have been encountered.

The Copper Queen's new Cochise shaft no. 10 down nearly to 1200 feet, and is said to have cut no ore and found very little water. The latter is hoped for to be used in the new concentrator, which will be placed a short distance from the Cochise hoist. Plenty of water is expected about the 1200 level, while it is probable that ore lenses will be found at still greater depth. There is confidence that the shaft, one of the most worthy of the district, will be the outlet for ore in large quantity.

H. M. MORSE IS DEAD.

Mesa, Ariz., July 8.—Joseph H. Morse, founder of the Goldfield mining district, is dead at his home near this city, from injuries received three months ago. He was 52 years old and had lived nearly half his life in the district, and was a deputy sheriff. His widow, three sons and three daughters survive.

Yuma, Ariz., July 8.—Everett Newland, lately discharged from the state penitentiary after serving a term for burglary, again is in jail, lodged in the county prison through the trick of Mrs. Frank Hamilton. She found him skulking around the premises of a neighbor, flashed on him an electric torch, and then held him with a revolver till a telephone message brought the sheriff.

Several women are employed as draftsmen by the Iowa state highway department.

Yuma, Ariz., July 8.—Hate clerk R. F. Seargeant, of the state corporation commission, returned from a freight rate conference at El Paso, holds out the hope that Las Cruces will be given the same grain freight rate that is enjoyed by El Paso from Kansas City, and that coal freight rates from the Caribee and the Clark fields may be modified.

San Juan, Porto Rico, July 8.—In complete return of Friday's registration for the draft of those reaching the age of 21 since last registration day indicate that the total throughout the island will be somewhat smaller than the estimated 13,000.

where he will be joined by Mr. Windes, who will become auditor for the bank.

San Juan, Porto Rico, July 8.—In complete return of Friday's registration for the draft of those reaching the age of 21 since last registration day indicate that the total throughout the island will be somewhat smaller than the estimated 13,000.

MOVIE OF A MAN AND A SERMON

By Briggs

SEATED WELL UP IN FRONT
SERMON BEGINS
IN FIVE MINUTES - YAWN SUPPRESSED
BRACES UP
CAN HARDLY KEEP EYES OPEN
BECOMES COCK-EYED FROM EXTREME DROWSINESS
HEAD FLOPS FORWARD
RECOVERS AND TAKES AN EXAGGERATED STARE
LOOKS CAUTIOUSLY ABOUT TO SEE IF HE IS OBSERVED
GRADUALLY LISTS TO STARBOARD
SUDDENLY AWARE THAT SERMON IS OVER AND RESUMES INTEREST IN LIFE
CLOSING EYES WITH VIGOR

WOMAN HOLDS SUSPECT UNTIL OFFICERS ARRIVE
THINKS LAS CRUCES WILL GET LOWER FREIGHT RATES
QUITS CREAMERY BUSINESS TO ENTER CALIFORNIA BANK
NEARLY 10,000 REGISTER IN PORTO RICO FOR DRAFT

The Music of Our Drill Will Soon Give Way to Gurgling Gusher With Oil—Oil—Oil—If Present Indications Count In The Famous

YOUNGSTOWN POOL

The Okmulgee Field Oil Company Is a Home Company With Offices in Okmulgee, Okla.

You Must Catch Opportunity Now or Never

THE music of the drill will soon give place to the gurgling of the gusher with oil—oil—oil if all the present indications count. We are making good headway in the Youngstown Pool lease where it looks like a veritable cinch for a fifteen hundred barrel well—where a three thousand barrel well is more likely.

This stock will not be on the market much longer. We are offering but a limited amount for development purposes. We are unlike many companies that have but a single doubtful lease on which to base their stock offers. We have a splendid three-quarter interest in forty acres in the Youngstown pool on which we are drilling. We have also a well down approximately 1800 feet in Grady county where we own a fourth interest in 20,000 acres of splendid territory where the geologists say we are sure to find oil. Then your third chance—and it is also near a certainty—is the eighty-acre lease in the paraffine section just southwest of Tulsa.

THE GRADY COUNTY 20,000 ACRES

IT IS sometimes difficult to impress upon the stock buyer's mind the actual value of such a property as this when there are so many exaggerations bandied about the public. Fortunately we have had a number of highly responsible businessmen look over our properties and without exception they have stated that we have the best oil proposition on the market today. Their universal opinion is that we state our case too mildly—that we have not made our language strong enough to express the real value of our holdings. Be that as it may we have a clear conscience and we have misrepresented nothing but have rather underestimated the value of the company's possessions. The Grady County 20,000 acres lies in a direct line of the anti-cline that connects the El Dorado fields of Kansas, the Garber and Billings fields on the north and the Comanch, Elmer and Walters fields and then running on into Burkburnett and Elberta in Texas. Geologists say we unquestionably have oil on these holdings. We have selected a point picked by geologists as the best. It is centrally located in the 20,000 acres and we believe we will bring in a genuine permanent gusher.
